DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Koch et al.
(US5299212).

With respect to claims 14-16 and 18-21, Koch show in Fig.3 a multi DBR laser 10 (modulated light source), a Bragg grating 21 coupled to the light source, a fiber PM coupler (col.5, l.40-45), a thermoelectric cooler means 17, a sensor 27, detectors (19, 22) and a feedback circuit (23-26).

With respect to claim 17, Koch show in Fig.3 the Bragg grating is coupled to the source by PM optical fiber.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-6 and 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koch et al. (US5299212) in view of Aleksoff (US6611645).

With respect to claims 2-3, 5-6, and 10-13, Koch disclose all limitations of the claims except for the tilted grating tap. Aleksoff teaches the tilted grating tap (claim10). For the benefit of a wavelength stabilized semiconductor laser, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Koch a tilted grating tap as taught by Aleksoff.

With respect to claim 4, Koch show in Fig.3 the Bragg grating is coupled to the source by PM optical fiber.

Applicant's argument is not persuasive in view of the new ground of rejection. and moot
